Viruses are afraid of soap!

time: 5 minutes

preparation: easy

You need:

Pepper in a pepper mill; a soup plate; water; soap

Listen attentively,
when your child reports
his concerns and needs!

Viruses are afraid of soap!

time: 5 minutes

preparation: easy

What to do:

1. Fill some water into the soup plate. Top with a few turns of the pepper mill. Tell your kid to put his finger in the water. Nothing happens.
2. Now it is time for the soap. Ask the child to put some soap on his finger and tell him to repeat the experiment. The peppercorns move away from the finger and react like viruses.
